Choosing an Asset Allocation Strategy

• Employers asset allocation strategy choice is a financial decision. Employers are not picking investment opportunities.

• Plan conditions which might cause an employer to consider an asset allocation with lower expected return
  – OPEB liabilities are capped and NOT expected to grow
  – Super-funded plan
  – Stable asset value required to provide near term payout
  – More stable (but higher) ARC

Time weighted return reports the performance of the investment vehicle, not of the employer assets. Returns are gross. Historical performance is not necessarily indicative of actual future investment performance or of future total program cost. Current and future performance may be lower or higher than the historical performance data reported here. Investment return and principal value may fluctuate so that your investment, when redeemed, may be worth more or less than the original cost. The value of an employer’s CERBT fund shares will go up and down based on the performance of the underlying funds in which the assets are invested. The value of the underlying funds’ assets will, in turn, fluctuate based on the performance and other factors generally affecting the securities market.
